# INTRODUCTION

Practo is a prominent healthcare technology startup that was founded in 2008 by Shashank ND and Abhinav Lal in Bangalore, India. The company has gained widespread recognition for its innovative platform, which aims to simplify and improve the healthcare experience for both patients and healthcare providers.

Practo offers a range of digital solutions and services that connect patients with doctors, hospitals, diagnostic labs, and pharmacies. Some of the key features and services provided by Practo include: Doctor Discovery ,Telemedicine, Health Records.

# Objective:

The objective of web scraping Practo's website is to collect comprehensive and up-to-date data on healthcare professionals in the Delhi region. By extracting information such as doctors' names, specializations, clinic or hospital affiliations, and patient reviews, this web scraping endeavor aims to create a valuable database that can serve various purposes. This data can be used for building directories, assisting patients in finding suitable healthcare providers, conducting market research, or facilitating outreach and partnerships between medical professionals and healthcare-related businesses. The scraped data will provide a valuable resource for improving healthcare accessibility and information dissemination in the Delhi area, ultimately enhancing the healthcare experience for both patients and practitioners.

# Web Scrapping:

- Web Scrapping is a technique to extract a large amount of data from several websites.
- Web Scrapping extracts the data from websites in unstructured format.
- It helps to collect these unstructured data and convert it in a structured form.
- Requests library is used for making HTTP requests to a specific URL and returns the response
- BeautifulSoup is used to extract information from the HTML and XML files.

# DATA COLLECTION:

Practo -

<https://www.practo.com>

# LIBRARIES USED:

## 1. Web Scraping Tools

- Python
- BeautifulSoup
- Requests

## 2. DATA CLEANING AND MANUPULATING

- NumPy
- Pandas
- Regular Expression

## 3. DATA VISUALIZATION

- Matplotlib
- Seaborn
- Plotly

# INTERFACE OF THE WEBSITE ALONG WITH HTML

The screenshot displays the Practo website's search results for dentists in Delhi. The interface includes a search bar, navigation links, and a list of search results. The right side of the image shows the corresponding HTML structure and CSS styles for the search results section.

**Website Interface:**

- Search bar: "Dentist"
- Filters: "Availability", "All Filters", "Sort By", "Relevance"
- Advertisement: "Prioritise Oral Health with Practo Dental Clinics. Expert dentists & clinics rated 4+ on Clinic Excellence Rating\*\*. Get up to 50% off on consultation\*"
- Results: "397 doctors available in Delhi". "Book appointments with minimum wait-time & verified doctor details"
- Result Card: "VIN SMILES Advanced Dentistry", "2 Dentist", "6-13 years experience", "Greater Kailash Part 2"

**HTML Structure (Right Panel):**

```
<!DOCTYPE html>

## DATA CLEANING:

- Check for Duplicates
- Drop the duplicate column and unnecessary columns.
- Checking and removing special characters.
- Identifying and imputing missing values.
- Data Type conversion.

## Summary statistics of numeric columns

```

## Distribution of doctors experience

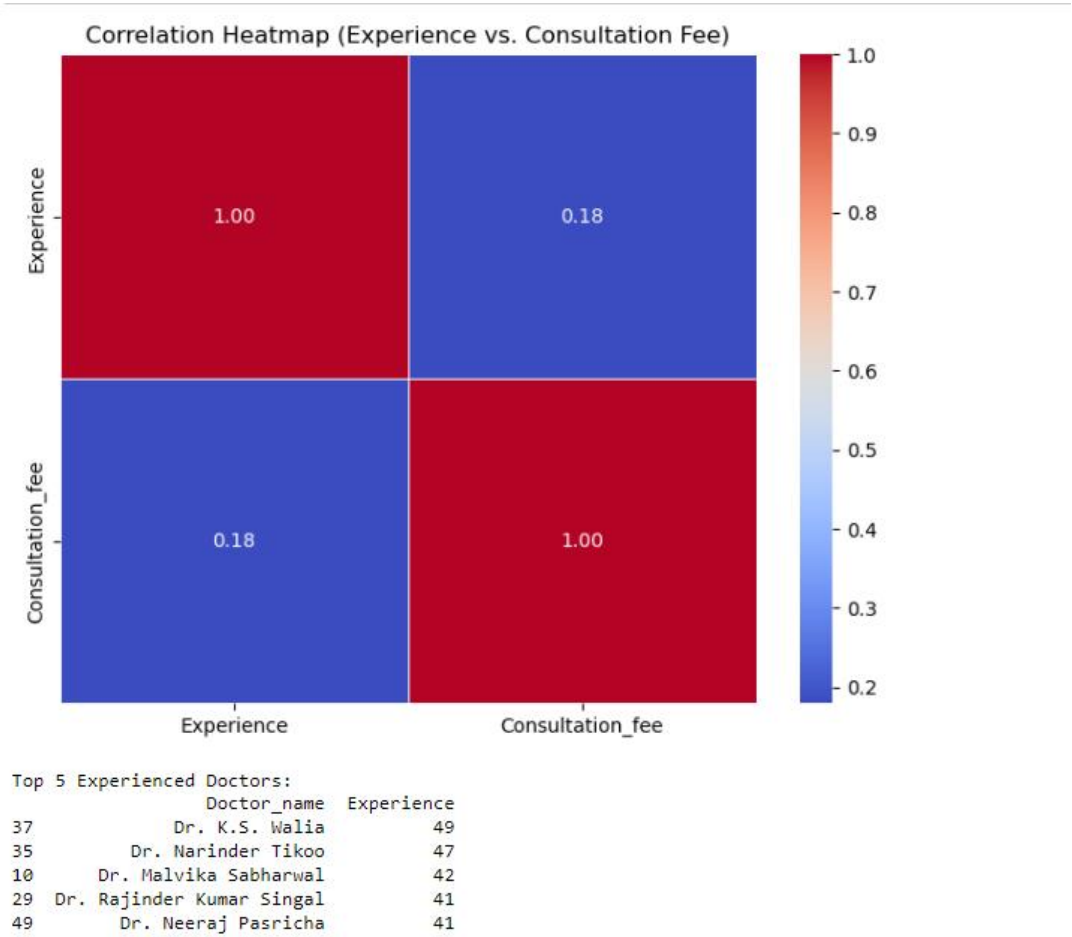

```
Average Experience: 27.51 years
Minimum Experience: 11 years
Maximum Experience: 49 years
```

Distribution of Recommendations

Correlation Heatmap (Experience vs Consultation Fee)

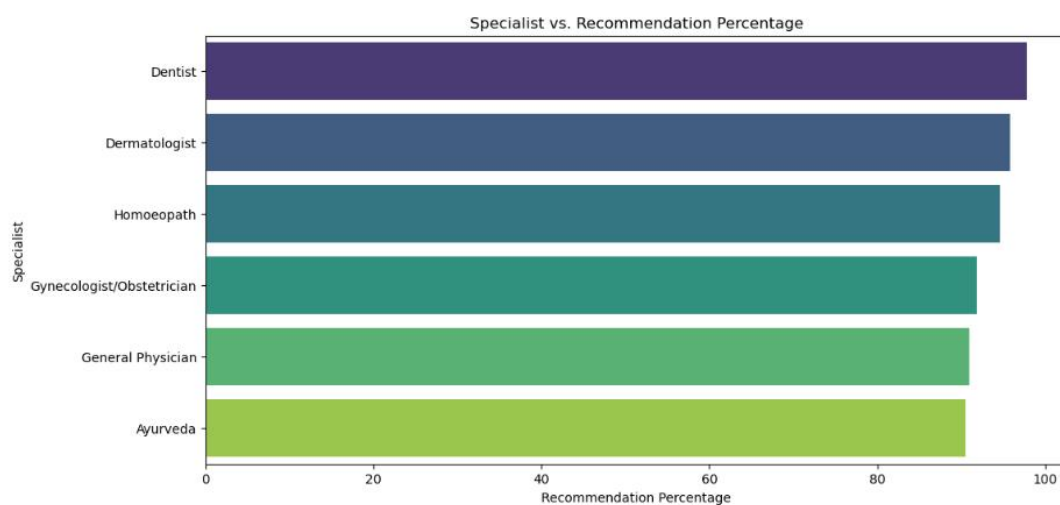

### Top 5 Doctors with the Highest Years of Experience:

	Doctor_name	Experience
37	Dr. K.S. Walia	49
35	Dr. Narinder Tikoo	47
10	Dr. Malvika Sabharwal	42
16	Dr. Yuvakshi Juneja	41
29	Dr. Rajinder Kumar Singal	41

### Top 5 Doctors with the Highest Consultation Fees:

	Doctor_name	Consultation_fee
17	Dr. Shakuntla Kumar	2000
29	Dr. Rajinder Kumar Singal	1800
34	Dr. Atul Bhasin	1800
15	Dr. Madhu Ahuja	1500
20	Dr. Pallav S Kishanpuria	1500

### Specialist vs Recommendation Percentage

### Difference in Recommendations Based on Specialist:

	Specialist	Recommendation
1	Dentist	97.777778
2	Dermatologist	95.800000
5	Homoeopath	94.600000
4	Gynecologist	91.888889
3	General Physician	91.000000
0	Ayurveda	90.571429

### **Managerial Implications and insights that can be derived from this data:**

#### **Specialty Analysis:**

Healthcare organizations can use this data to understand the distribution of doctors across different specialties. For example, it's clear that there are dentists, gynecologists/obstetricians, dermatologists, general physicians, and homeopaths in the dataset.

Hospitals can use this information to assess the availability of specialists in different areas

### Experience vs. Recommendation:

Healthcare institutions can analyze the relationship between a doctor's years of experience and their patient recommendations. This can help in identifying whether more experienced doctors tend to receive higher recommendations. Hospitals might consider promoting doctors with high recommendations as part of their quality assurance efforts.

```

Experience Summary:
count    59.000000
mean     27.508475
std      10.284526
min      11.000000
25%      18.500000
50%      26.000000
75%      37.500000
max       49.000000
Name: Experience, dtype: float64

Consultation Fee Summary:
count    59.000000
mean     934.067797
std      408.188254
min      330.000000
25%      550.000000
50%      1000.000000
75%      1150.000000
max      2000.000000
Name: Consultation_fee, dtype: float64

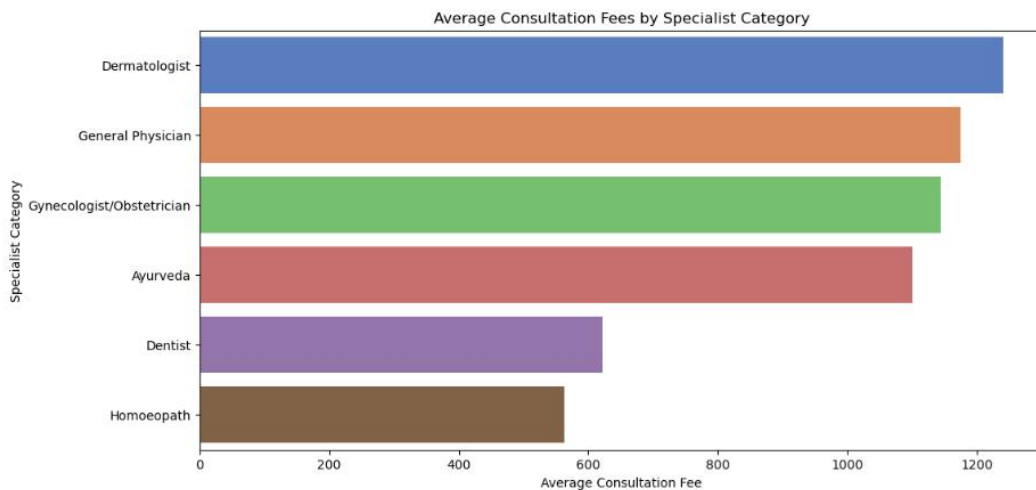

```

## Consultation Fee Analysis:

Analyzing consultation fees across different specialties and areas can help healthcare organizations set competitive pricing for their services.

Hospitals can also identify whether there is a correlation between consultation fees and the percentage of patient recommendations.

## Location-Based Insights:

Healthcare facilities can analyze the distribution of doctors in different areas and cities to optimize the allocation of medical staff.

It can help patients find doctors in their preferred locations.

Hospital Selection:

Patients can use this data to compare hospitals based on consultation fees and doctor recommendations. For instance, some patients may prefer hospitals with highly recommended doctors.

Hospitals can evaluate their competitiveness by comparing their consultation fees and doctor recommendations with other institutions.

Hospital-wise Consultation Fees:

	Hospital_name	Consultation_fee
14	Dr. Sudha's Ayurveda Kendra	1500.000000
9	Dr Anjana Kalia's Diet clinic	1500.000000
1	Aashlok Hospital	1500.000000
22	SCI International Hospital	1375.000000
2	Apollo Spectra Hospital	1250.000000
15	Hakim Hari Kishan Lal Dawakhana	1100.000000
3	BLK-Max Super Speciality Hospital	1100.000000
28	+ 1 more	1086.666667

23	SD Homoeopathy Multispeciality Clinic	400.000000
11	Dr Khera's Homoeopathic Clinic	330.000000

## Recommendation Analysis:

Healthcare organizations can track the average recommendation percentage for different specialists. This information can be used for quality assessments and improving patient satisfaction.

It's important to note that doctors with high recommendation percentages may attract more patients.

**Marketing and Promotion:**

Hospitals can use the data to identify high-performing doctors for marketing and promotional activities to attract more patients to their facilities.
